In August 2017, Autodesk acquired Warpstone, a non-profit foundation that provides technical infrastructure for CAD industry initiatives and created a new group called Warpstone Business Development (WBD) that works directly with Autodesk customers, partners, and other ecosystem players. In June 2019, Autodesk announced the acquisition of Trace, a software-testing platform that provides solutions for the testing of the software code in major CAD programs such as Autodesk's own design applications and third-party

on a trial basis or paid on a yearly, monthly, quarterly, half-yearly, or yearly basis. What are the main AutoCAD types? AutoCAD models can be created in either 2D or 3D, depending on the type of drawing and the type of paper on which it is printed. 2D: The 2D type allows for 2D modeling with features that can only be seen on paper. It offers most of the features of traditional CAD. The 2D type allows for 2D modeling with features that can only be seen on paper. It includes a powerful set of features that allows users to annotate and revise the 3D models. What is the difference between free and paid AutoCAD? With the paid versions, users can use AutoCAD at any time, anywhere, and on any type of computer. This version can also be

The PADI Caribbean Student Safari has been a huge success over the past year, with 2,972 students and their instructors from 10 countries having participated in more than 1,000 classroom and dive training activities. The culmination of the 2015 Bahamas safari was a challenging oceanic "master" dive in the Bahamas, where the students participated in about 130 dives that took them to a range of dive sites, including several wreck dives. The instructors from the PADI Asia Pacific, Middle East, Africa,

Caribbean and Central America, and the USA were faced with 10 challenging dives, ranging from off shore dive sites to liveaboards and wrecks. At the end of the safari, the instructors were ready to evaluate the student results and the results were extremely impressive. Overall, the students had completed 3,842 dives, 1,271 rescue decompression dives, 3,500 bottom time dives and 9,377 surface interval dives (not including the timed pilot dives that were performed for evaluation). The dive results were impressive; over half of the students achieved their required and certified ratings, and more than 10% of the students achieved the "master" rating. "It was a great experience for the students, instructors and myself. Seeing the students dive to depths of 100 meters made me realize how important it is to make sure our safety is at the

forefront and to be able to use the skills that we learn in the classroom to ensure that the students are safe while diving," said Jeff Young, the head Instructor of the PADI Caribbean Student Safari. The PADI Caribbean Student Safari includes five days of classroom and dive training activities, followed by five days of diving. The students are required to attend classes throughout the entire experience, because diving and education are complementary processes and they need to make sure that the students have the necessary skills in the classroom, prior to diving, to ensure a safe dive experience. The students have three opportunities to complete the required classroom activities: - During the first two days of diving, the students can attend the dive classes. The goal of these classes is to teach
