CAD plus in motion AutoCAD contains C++ code for creating a 3D animation of a 2D drawing. AutoCAD Drawings can be animated in motion to create what is referred to as a "motion graphic" as an integrated part of the AutoCAD drawing. Objects such as rooms, windows, doors, aircraft, and furniture can be animated. Scenarios such as moving windows and doors, opening and closing building walls, and variations in lighting are used to create the animations. A limitation of the technology is that the animation is based on the CAD files. It is possible to create a motion graphic that can be exported to an XML format for use by applications that support such animations, such as the Magic Carpet animation system.
