The AutoCAD user interface consists of several elements including the program start page, the main drawing workspace, toolbars, menus, dialog boxes, command lists, palettes, lists, the editor (also known as a zoom window) and custom tools. Key features AutoCAD, like most mainstream CAD applications, provides facilities for working with various types of geometrical and non-geometrical data. It offers full-scale 2D and 3D drafting and visualization. Its capabilities are in most cases the same as those offered by many other state-of-the-art applications, but this software has a distinctive, company-specific user interface.

As the data model is based on CAD objects, the user interface is designed to work with these objects. Features include: Basic 2D drafting and geometry creation. 2D drawing creation and editing. 3D modeling, including placement of objects, solids, surfaces, and volume blocks. Interactive 2D drafting tools (e.g. line, arc, spline, shape, window/wall, text, line feature, path, and polyline), including snap to, lock, and commands to manipulate a selection. Visualization and conversion of 2D and 3D geometry into drawings or other formats. Creation and editing of attributes of 3D objects, including faces, edges, and colors. Approximate calculation of area, volume, angle, and centroid. 2D and 3D dimensions. Numeric precision. 3D printing. Data management, including import and export of various formats of data (e.g. DXF, DWG, DGN, DWF, DXF). Support for parametric dimensioning and BOM generation. Hardware and platform support AutoCAD is available for the following operating systems and hardware platforms. As with all CAD applications, the platform requirements are: System Architecture — Windows NT, Windows 2000, Windows XP, Windows Vista, Windows Server 2008. Operating System — Windows operating system Processor and system memory — 2 GHz or faster processor, 2 GB of RAM or more Graphics card (for integrated graphics, DirectX 9.0 compliant graphics card for advanced features) Audio card (for high-quality audio) Screen resolution — at least 1024×768 pixels. the evidence considered by the district court. III. CONCLUSION 28 For the foregoing reasons, the district court's denial of Maynard's motion for judgment of acquittal is AFFIRMED. * District Judge of the Eastern District of Louisiana, sitting by designation 1 See n. 2 2 At the close of the government's case, Maynard moved for a judgment of acquittal on the basis that there was insufficient evidence to show that he had knowingly received stolen property. A rational trier of fact could have concluded beyond a reasonable doubt that Maynard knowingly received stolen property. The record contains testimony that a person with no connection to Maynard drove a car in which Maynard was riding. The car contained over a dozen items of property, some of which were expensive. A police officer testified that the car's ownership and registration had been falsified. In a conversation the day after the car's theft, Maynard admitted his knowledge that the car's ownership had been stolen. This testimony alone was sufficient to support a jury verdict that Maynard knowingly received stolen property. See *United States v. Kennedy*, 596 F.2d 362, 364 (4th Cir.1979), cert. denied, 444 U.S. 1025, 100 S.Ct. 688, 62 L.Ed.2d 659 (1980). Thus, the district court properly denied Maynard's motion for judgment of acquittal 3 A person commits the offense of receiving stolen property if, knowing or having reasonable cause to believe that property was stolen, he receives, conceals, maintains, or disposes of the property in his possession, knowing it to have been stolen or having reasonable cause to believe that it was obtained through the commission of a crime. The statute has three exceptions. A defendant may not be convicted of receiving stolen property if he received it in the course of certain
