If you ever want to get serious about what you do, be sure to look into the Adobe Photoshop Certification Program. ## Document File Formats Any time a digital image is transferred from one place to another, it must be stored and saved in a format called a `_document file format_` or `_file format_` (or just a `_file_`). The way that an image is stored in a document file depends on the type of image: * **Static image:** A static image is one that is created as an illustration. The image can be transferred and saved to a hard drive, network storage device, or other storage medium. The image can be viewed on your

computer monitor or printed on paper, as long as the printed version of the image can be made to look like the image you saw on your monitor. * **Vector-based image:**

A vector-based image is one that can be manipulated in a computer without any loss of quality. The image is created by using the various lines, dots, curves, and shapes in the art program. * **Raster-based

image:** Raster-based images are the best option for photographs and illustrations. Raster images contain a grid of pixels that show the image as a group of dots or squares. You can manipulate a raster image, but altering the picture results in the loss of quality in the image. Understanding the file formats that each type of image uses is an important part of understanding how to take your work to the next level in terms of quality.

1. Field of the Invention The present invention relates to a cable connector assembly, and more particularly to a cable connector assembly having improved contact reliability. 2. Description of Prior Art A conventional cable connector assembly generally comprises an insulative housing, a plurality of contacts retained in the insulative housing and a pair of metallic shells enclosing the insulative housing. The contact is a rectangular metal element which is stamped and formed from a single metal strip. The insulative housing defines a plurality of passageways for receiving the contact therein. Each contact defines a contact portion projecting from an end of the insulative housing and a cantilever portion extending downwardly from the contact portion for a soldering tail. The contact portion is inserted into the passageway of the insulative housing while the soldering tail is soldered to an end of a cable. However, too many passageways is

easily produced in the insulative housing. Therefore, the contact may not stay in the passageway of the insulative housing tightly. Thus, the soldering quality of the contact is reduced. Hence, it is desired to have a cable connector assembly which improves the contact reliability.Q:

Authenticating Users with Google App Engine + JWT I'm writing a service that uses Google App Engine. I'm also trying to make users authenticate with JWT, where they are periodically sent a JWT and a refresh token after authenticating. I don't see anywhere in the JWT guide where I can set the scope of the tokens. I'm assuming I need to add `scope="openid email profile"` to each of the tokens, but if I do that then I'm never able to login successfully, as it's supposed to require the "email" scope. I'm a bit confused as to how I'm supposed to request a new token periodically when this is happening. I read the guide on the Google App Engine documentation here, but it doesn't seem to be quite as straightforward as I would expect. A: It is expected behavior that you don't have the

permission to `user_id:email`, so you won't be able to use that property in the access token. A refresh token can be used to obtain a new access token, including the user's email, and it also allows to obtain any other scopes (except the ones that are not supported on the API we are using). To get a new token you have to perform an HTTP POST

Note If you're in color mode when you use one of these tools, be careful not to accidentally turn this tool into the white balance adjustment tool. Turning the tool into this adjustment tool means that you're adjusting the color balance and brightness of a photo or image—which is a different thing from using these tools to tweak colors and contrast. # Chapter 4. Choosing and Preparing Photos for Web Use With the web, you can capture and display just about any sort of image or design element you could dream up. But web design isn't just about displaying web-friendly images. You

also want to make sure that your web page content is properly formatted, including images that can work well in browsers like Internet Explorer and Firefox. For example, a picture of a friendly kitten can look cute and cute when displayed on your
